

Figure Gallery

10 figures for *The Dynamic Reflexive Loop and the Five Organs*. Pick by number (e.g., “1, 3, 5, 7, 9”) and I will wire them into `main.tex`.

Figure 1 — The One Loop (System $\leftrightarrow$ World, two channels)

Use: Introduction or §Loop. Two channels, three consequences (models rot, measurement corrupts, truth moves).

Figure 2 — The Expanding Reflexive Loop

Use: §Expanding loop. $\text{Self}(t+1) \neq \text{Self}(t)$, $\text{World}(t+1) \neq \text{World}(t)$, spirals wider.

Figure 3 — The Five Organs as a Cycle

Use: Introduction or §Five Organs. The warp — lose one and a task distribution exploits the gap.

Figure 4 — Five Organs at Every Scale

Scale	Boundary	Memory	Saliency	Damping	Observer
Molecule	Lipid mem-brane	E-LTP / L-LTP	Ca ²⁺ +DA/NE	LTD/BCM	BCM θ_m
Mind	Narrative self	Hippo / cortex	Affect [0.5,2.0]	PFC veto	γ -gate
Harness	Ledger	Light $\rightarrow$ Deep	AffectState	cull_failed	γ -gate
Universe	Horizon	Measure / law	Inflation	Expansion	Awareness

Use: §Five Organs or §Levels. Same five, different substrate. Full 8-row table in paper.

Figure 5 — How the Eight Levels Nest

Use: §How it all works at every level. One loop nested 8 times — broadcast $\rightarrow$ input, consolidation $\rightarrow$ boundary, state $\rightarrow$ bias.

Figure 6 — The Parliament (coalition competition $\rightarrow$ winner broadcast)

Use: §Mind or §Parliament. No captain, configuration votes, winner experienced as “my thought” 200ms after.

Figure 7 — The γ -Gate (slower loop vetoing faster one)

Use: §Observer. Why γ not accuracy — accuracy can be gamed by always saying “no.”

Figure 8 — Reality, Perception, and Self as One Loop’s Three Sides

Use: §Reality/Perception/Self. All three are controlled hallucinations, maintained not found.

Figure 9 — Four Methods, One Destination

Method	Substrate	Instrument	Shares with others
Evolution	Worm, 302	Natural selection	Nothing — except constraint
Connectomics	Fly, 140k	Electron microscopy	Nothing — except constraint
Mathematics	Theorem, 23pp	Selection, regret	Nothing — except constraint
Engineering	Harness, 11 mod	Code, audit trail	Nothing — except constraint

Only the constraint. That's why convergence is informative.

Use: Introduction or §What it all means. Four methods share nothing except the constraint.

Figure 10 — The Only Real Choice

What you feed the loop — salience, rehearsal, myelination	
↓	
Whether the watcher can check — witness, γ -gate, sham	

Pick what you rehearse	Externalize the witness — write
Protect sleep	Never let a fast loop grade its own homework
Buy BDNF	You don't choose whether to feed the loop — only what you feed it

Use: §Only Real Choice or Conclusion. The two things that are choosable.

Pick by number (e.g., “1, 3, 5, 7, 9”) and the chosen ones will be wired into `main.tex` at the right sections. All figures are TikZ — no external files, compile with `pdflatex`.
